

# Prepared reports. Faster review. Better operational context.

A SharePoint-first manufacturing intelligence platform for supervisor and manager decision support.

## How people use the outputs

**Shift Drafts** automate collection, reconciliation, organization, and spreadsheet preparation. Supervisors review exceptions, add context, and finalize faster.

**Daily Production Reports** help managers understand production, molding, labor, quality, plan attainment, and downtime; investigate constraints; prioritize follow-up; and inform staffing, plan, maintenance, or coordination changes.

**Weekly Production and Downtime Reports** show trends, comparisons, and recurring problems for planning, improvement, meetings, reviews, and handoffs.

| INPUT                                    | PROCESS                                   | OUTPUT                                            | REVIEW + ACTION                     |
|------------------------------------------|-------------------------------------------|---------------------------------------------------|-------------------------------------|
| Forms, SharePoint, files, machine events | Ingest, reconcile, link sources, validate | Shift drafts, daily and weekly reports, dashboard | People interpret context and decide |

## Operational value with clear boundaries

**Modeled planning opportunity:** 20 supervisor plus 10 manager hours of reporting effort per week, representing about \$52K in annual labor value under documented assumptions.

The value is reduced preparation, faster access to consistent information, visible exceptions, and more time for interpretation and follow-up. The model is not booked savings or a guaranteed outcome; the platform supports decisions rather than making them.
